VIRTUAL ROBOT COMPANION / MK.01

MATRIX DISPLAY GUIDE

UNO Q status animations and display states

VERSION 0.1.5

UNO Q · RETROPIE · BATOCERA

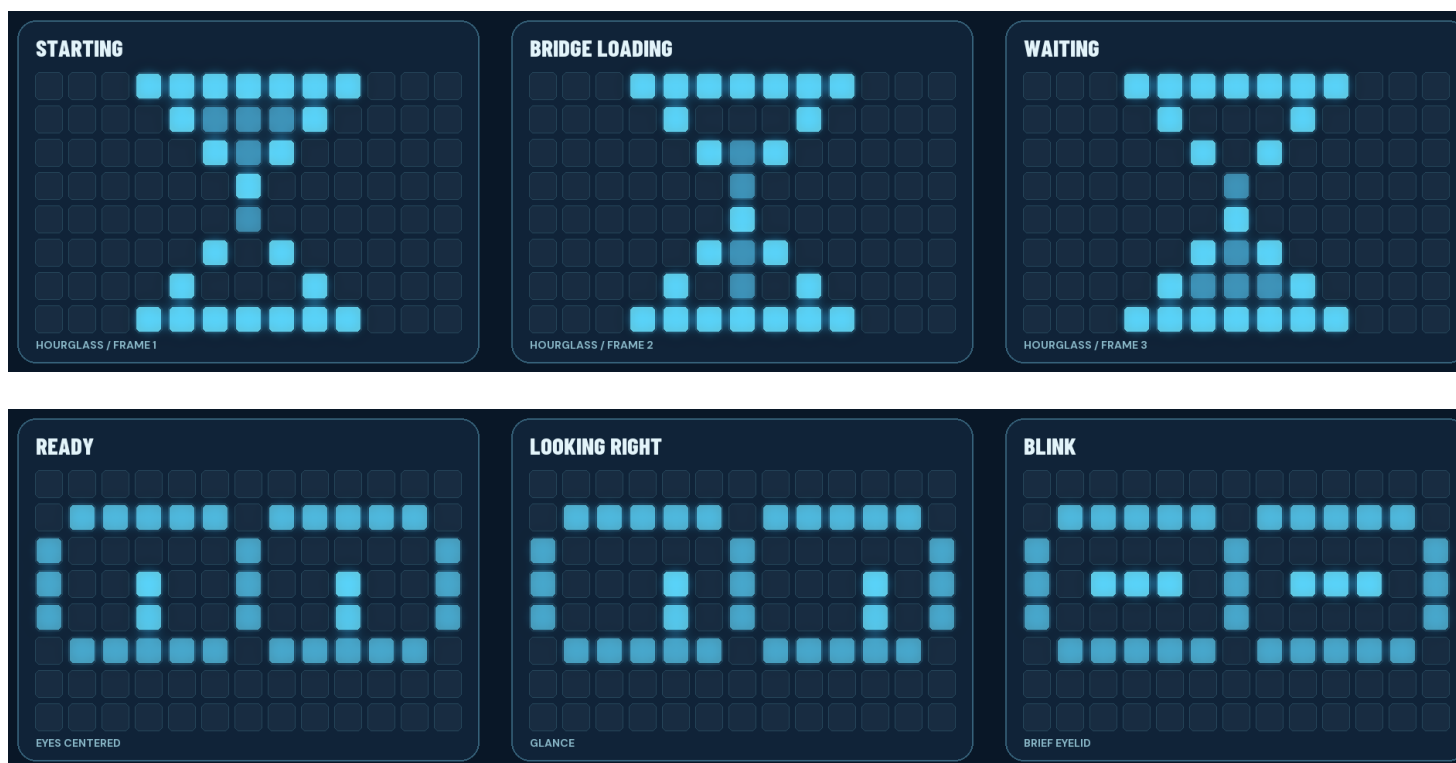

CHAPTER 01 / MATRIX DISPLAY GUIDE

UNO Q matrix display guide

The UNO Q's blue LED matrix gives you a quick view of Buddy's state while the full scene plays in your browser. The examples below show the small display animations. For the robot, game pieces, console connection, and detailed messages, open Mission or Setup using the links printed by the UNO Q installer.

Starting and waiting

When R.O.B. Vision starts or reconnects, an hourglass moves across the matrix. Once the controller is ready, Buddy's eyes appear. They glance around and blink while he waits for a game.

Playing a game

Starting Gyromite briefly shows GY; starting Stack-Up briefly shows SU. Buddy's eyes then return, with a small accent for the selected game. When he accepts a movement command, his eyes react briefly to the action.

Test and pairing

You see	Meaning	What to do
Moving hourglass	R.O.B. Vision is starting or reconnecting.	Wait for Buddy's eyes. If the hourglass stays, check that the App Lab app is running.
Buddy's eyes	The controller is ready.	Open Mission for the selected game and console link.
GY or SU	Gyromite or Stack-Up was selected.	Watch Mission for the virtual game table and GAME FRAMES LINKED .
Pulsing T	The game-frame link recognizes a game's Test signal.	Continue the game's Test check on Setup. A brief steady T can also follow a ready-light command.
Pulsing P	Console pairing is in progress.	Enter the code and fingerprint printed by the console installer on the browser Setup page.

The matrix returns to the game eyes after a Test or ready signal ends. Its small game accents are decoration; use Mission and the game screen to check piece positions and gate responses.
