

R.O.B. Vision quick reference

The UNO Q controls Buddy's movement and game pieces. RetroPie or supported Batocera sends game signals to the UNO Q.

Where	Action	Result
Mission	Select Gyromite, Stack-Up, or Pose Lab	Choose the virtual scene while no game is active.
Mission	Run Demo Sequence	Finite animation; available while paired and idle.
Mission	Home	Reset selected virtual game and pieces.
Mission	Emergency Stop	Live: clear game and release pads. Preview: cancel local script.
Mission	Fast Gates during live Gyromite	Blue 2, red 1, Release Both 0; press again to release a color. Auto-release after 60 seconds.
Setup	Pair Console / Check Link	Pair a console or refresh its authenticated online status.
Game Test mode	Automatic red light	Blink R.O.B.'s red light when linked game frames carry the Test signal; no movement.
Setup	Gyromite / Stack-Up checks	Send manual pad or movement commands to the live model.
Mission	GAME FRAMES LINKED	The console is sending game signals for the selected ROM; automatic movement uses those frames.

In Stack-Up, press Select on the ROBOT BLOCK screen, choose Test, then press Start. The artwork remains visible while the Test signal plays.

Open your UNO Q address to visit Buddy, or choose R.O.B. Vision if both apps are installed. The installer also prints direct Mission and Setup links using the device name and IP address.

If a move is blocked, read the Activity Feed, raise Buddy's hands if needed, and try again. For controls and game pieces, see the [Game Manual](#). For a connection problem, see [Troubleshooting](#).
